# Guardz.

Robust Managed Cybersecurity Solution Built For Business Owners

Holistic Protection. Hassle-Free. Cost-Effective.

Proactively Protect Your Business From the Inside Out

With the Guardz-certified network of MSPs, SMEs can utilize a fully managed service tailored to their business type and size to protect against threats across all attack vectors, including email, devices, external exposure, employee negligence, and web browsers, ensuring that their business's security is protected effectively.

✓ Guardz certified MSP to the rescue

✓ Enjoy Hassle-Free Protection

✓ Gain Back Time in Your Calendar

All-In-One Cybersecurity Solution

Cloud Apps Security

Cloud-based apps such as Microsoft 365, Google Workspace, Dropbox, Slack, Zoom, Hubspot, Quickbooks, Monday, etc., hold a significant amount of sensitive information, making them valuable and popular targets for hackers. As a result, Guardz enforces cloud app security policies through risk identification and regulation compliance whenever its cloud-residing data is accessed.

Email Security

Email is a prevalent entry point to an entire organization. Phishing attacks include fraud, impersonation, fake links, malicious files, images, etc. Guardz seamlessly integrates with your Microsoft 365 or Google Workspace to actively monitor the inbound traffic and block malicious activity automatically.

Device Protection

Hackers need just one unprotected device to gain access to your entire network. Unfortunately, any device is a target, and these days it's easy to trick users into loading malicious software, and even keyboards are entry points for attackers. Guardz proactively protects all devices, detects vulnerabilities, blocks malware, and quarantines threats.
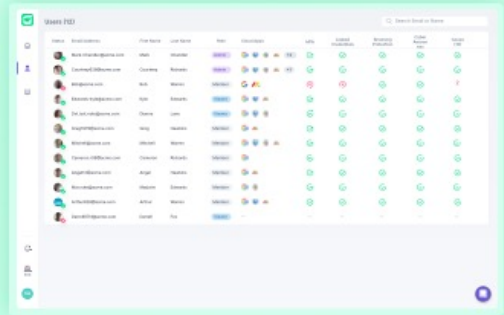

Web Browsing

Users are often unaware of the tactics, links, and ads that lead to malicious websites or applications and expose data or confidential information. For example, your users might get critical data stolen just by clicking on a site that embeds dangerous spyware into your system. Guardz provides a lightweight extension designed to help users browse quickly and securely. It will clean your browser, speed it up, and protect private information.

Cyber Awareness

Lack of employee awareness is a significant risk. The more familiar the employees are with the tactics of cyber attackers, the less likely your clients' business will fall prey. Guardz provides your users with training sessions based on their current areas of weaknesses automatically.

Uncompromised Data

Most of the organization's data is distributed in the cloud. Guardz provides complete data protection that covers the identity of the user and devices accessing the data infrastructure and automatic identification of permissions and data violations.

Ensure the security of your business using cutting-edge and innovative cyber technology, while being paired with a proficient MSP professional who will handle the technical details.

LIFU TECHNOLOGIES

Guardz.

Achieve Optimal Business Performance
with a Fully Managed Service

Access to Specialized Expertise

With Guardz, you can be sure that highly skilled security experts will protect
and manage your data. These experts are constantly up-to-date on industry developments
and modern cyber threats.

Enhanced Security

With Guardz, the fully managed service provides advanced threat detection and response capabilities,
implements robust security policies and procedures, and conducts regular security audits
and assessments, all to improve your overall security posture.

Improved Focus on Core Business Activities

By shifting the responsibility of cybersecurity to Guardz, you can gain back time to focus
on developing your offering that will move your business forward.

Scalability and Flexibility

Guardz managed service can be easily scaled up or down to meet changing business needs,
enabling quick and easy adjustments to the required security resources.
